Professional Summary

Detail-oriented Bachelor of Arts student with strong analytical skills, a focus in Computer Science, and a background in data automation and systems administration. Experienced in designing automated data aggregation pipelines, managing database schemas, and translating complex datasets into actionable workflows. Proven track record of operational reliability, managing 1,400+ custom client orders with high-level technical accuracy.

Technical Skills

Data & Systems Analysis:	SQL, PostgreSQL, SQLite, MongoDB, Python (Pandas/NumPy), Microsoft Excel (Advanced), Data Crawling, Threat Modeling, Workflow Optimization
Languages & Frameworks:	C/C++, Java, JavaScript, TypeScript, Bash, React, Next.js, Node.js, Express
Tools & Operations:	Git, Docker, CMake, GDB, Linux/POSIX API, Virtualization, Playwright, credential isolation

Experience

Freelance Systems & Operations Analyst <i>Independent Contractor</i>	2020 - Jan. 2026
- Managed end-to-end service delivery for a global client base, completing 1,400+ custom technical orders with a 4.8/5.0-star rating. - Scaled operations to over \$30K in revenue, designing secure, reproducible database environments and credential isolation systems. - Analyzed client business requirements to formulate technical specifications, optimizing digital workflows for execution speed and accuracy.	
Media Operations Digital Asset Manager <i>Wilfrid Laurier University Athletics, Waterloo, ON</i>	Aug. 2023 - Apr. 2026
- Optimized and maintained WLU Athletics' digital media archives, designing file tagging systems for rapid search, distribution, and retrieval. - Monitored videography equipment logistics, scheduling shifts, and ensuring high-quality audio-visual capture for athletic events. - Collaborated with marketing and administrative staff to identify and parse target highlight metrics for social media platforms.	

Analytical Projects

JobScanner Pro - Automated Aggregator & Data Pipeline <i>Python, Playwright, SQLite, CSV/JSON</i>	2025
- Developed a multi-platform job aggregation system that scrapes major career sites (Indeed, LinkedIn) using Playwright. - Designed an SQLite database schema to store and deduplicate job post records, generating structured search exports. - Configured data filtering layers to filter listings by custom parameters (keywords, salary ranges, location constraints).	
findYOU - Productivity Dashboard & Systems Monitor <i>Python, React, Docker, Local Vaults</i>	2026
- Engineered a local productivity dashboard with a Python backend that writes tracking events to markdown-based data stores. - Implemented system timers (Pomodoro) and categorization matrices (Eisenhower) to analyze and optimize daily time-on-task distribution. - Containerized the application stack using Docker to ensure environment isolation and cross-platform runtime reliability.	

Education

General Bachelor of Arts <i>Wilfrid Laurier University, Waterloo, ON</i> <i>Concentration:</i> Computer Science Coursework <i>Relevant Coursework:</i> Data Structures I & II, Object-Oriented Programming, Database Systems, Systems Analysis & Design	Sep. 2021 - Present
---	---------------------

Awards

- Bronze & Silver Medalist - Skills Ontario Competition (3D Animation, Blender), 2018
